

Jacob Brassard

AI Search Visibility + Shopify SEO Growth System

Positioning

I help ecommerce brands improve how they show up across Google, ChatGPT, Claude, Gemini, and buyer research chats. The system connects product data, customer language, competitor gaps, real product photos, SEO keywords, and industry sentiment into better Shopify pages, blog content, FAQs, citations, and AI-ready answer assets.

Core Offer

Most SEO work targets one obvious keyword. This system maps the full buyer conversation: category searches, use-case searches, comparison searches, problem searches, and follow-up prompts. AI search is not one query. Buyers keep asking more specific questions until they feel ready to decide.

- Best tablet mount for a truck
- Best iPad mount for forklift use
- RAM Mount alternative for commercial vehicles
- Durable tablet mount for warehouse operations
- What mount works with this device, vehicle, or workflow?

What The System Does

Shopify catalog ingestion	Pulls products, categories, specs, use cases, and product relationships into the workflow.
Competitor understanding	Maps competitor positioning, comparison gaps, and where the brand is missing from buyer answers.
Real product-photo usage	Uses actual product visuals and context instead of generic AI content.
Industry sentiment research	Looks at Reddit, YouTube, forums, reviews, search results, and real customer language.
AI search prompt mapping	Tests broad searches and deeper follow-up prompts across the buyer decision path.
Traditional SEO alignment	Works target keywords into product, collection, blog, FAQ, and internal-link systems.
Citation and source readiness	Improves the pages and proof signals AI tools can understand, quote, cite, and recommend.
Implementation output	Turns audit gaps into Shopify-ready edits, briefs, FAQs, comparison pages, and monthly action plans.

Why It Is Different

- It does not stop at broad keywords. It anticipates the follow-up questions buyers ask AI tools before choosing a product.
- It does not produce generic AI content. It uses actual products, specs, photos, customer pain points, competitors, and industry language.
- It does not stop at an audit. It turns gaps into page edits, FAQs, internal links, citations, content briefs, and implementation tasks.
- It supports both traditional SEO and AI visibility, so the work compounds across Google search and AI-assisted discovery.

Offer Menu

Package	Price	Best For
Starter Audit	\$500-\$750	AI visibility check, competitor scan, keyword/sub-query map, and Shopify SEO fix plan.
Implementation Sprint	\$1,500-\$3,000	Page edits, collection/product content, FAQs, blog briefs or posts, internal links, and citation recommendations.
Monthly AI SEO Ops	\$1,000-\$3,000/mo	Ongoing prompt testing, content creation, Shopify updates, competitor monitoring, and monthly reporting.

Short Profile Hook

I help ecommerce brands improve their Shopify SEO and AI search visibility by turning product catalogs, customer language, competitor gaps, and real industry sentiment into better product pages, collection pages, blog content, FAQs, and AI-ready answer assets.

Proposal Template

Hi [Name],

I can help with this. My focus is Shopify SEO, AI search visibility, and product/content automation for ecommerce brands.

The way I approach this is different from generic SEO. I ingest the product catalog, understand the product use cases, analyze competitors, map buyer questions, and look at what real customers are saying across search, Reddit, YouTube, forums, and reviews. Then I turn that into Shopify-ready product, collection, blog, FAQ, and comparison content.

For AI search, I do not just test one broad query. I map the full buyer conversation: category searches, use-case searches, comparison searches, problem searches, and follow-up prompts. That helps identify where the brand is missing from ChatGPT/Claude/Gemini-style answers and what pages or citations need to be improved.

For this project, I would start with:

1. Product/catalog review
2. Competitor and keyword gap map
3. AI visibility prompt audit
4. Shopify page/content recommendations
5. Implementation plan or direct content/page updates

I can send over a small sample audit structure if helpful.

Call CTA

If you want, I can start with a small audit: I will review your products, competitors, search opportunities, and AI visibility gaps, then give you a prioritized fix plan before we do any larger implementation.
