

Jacob Brassard

AI Business Operations | Shopify Automation | AI SEO | Human-in-the-Loop Systems

Professional Summary

AI operations and automation specialist with hands-on experience building practical workflows for real estate, ecommerce, SEO, and business operations. Skilled at identifying operational bottlenecks, designing AI-assisted systems, testing them in real workflows, and turning them into repeatable processes that help teams move faster with less manual work.

Core Skills

AI workflow automation	AI business operations	Prompt engineering
Shopify automation	AI SEO and content systems	Real estate operations support
Lead research workflows	Human-in-the-loop systems	Process design and optimization
No-code/low-code automation	AI-assisted development	Operational tooling

Experience

AI Business Operations - Real Estate

Lee & Associates | 3 years

- Built and supported AI-assisted workflows for commercial real estate operations, research, and internal process execution.
- Improved data organization, lead research, property workflow support, and operational visibility using structured AI systems.
- Designed repeatable processes that reduced manual work and helped teams move from ad hoc tasks to documented operating workflows.
- Connected real estate business needs with practical automation, prompt systems, and human review loops.

Shopify Automation and AI SEO

iBolt Mounts | 1 year

- Worked on Shopify automation, product/catalog workflows, ecommerce operations, and AI-assisted content systems.
- Supported SEO and content workflows for products, collections, blog posts, and search-driven growth opportunities.
- Helped create systems for product data, content generation, page improvement, and operational execution.
- Used AI tools to improve speed, consistency, and review quality across ecommerce growth workflows.

AI Development Capabilities

- Builds AI-assisted tools that combine prompt engineering, structured inputs, automation, and human review.
- Creates workflow systems for research, lead generation, SEO, operations, ecommerce, and business process support.
- Comfortable acting as a loop engineer: designing the AI task, checking output quality, improving the process, and keeping a human approval step where accuracy matters.

Education

University of Denver	Expected 2026
Bachelor of Arts in Humanities
